What is protected?

The Gtechniq Platinum system is exclusive to car dealerships, and provides lasting protection for:

Paint

Glass

Interior

Wheels

Why Gtechniq Platinum?

Gtechniq are the global leaders in ceramic and other durable surface coatings. Platinum offers a scientifically tested, nano-based system of protective treatments that outperform anything else.

In 2001 Gtechniq was formed out of dissatisfaction with aftermarket surface protection products for cars. Advances in chemical nanoengineering, combined with a rigorous laboratory and real-world testing regime, has allowed Gtechniq to create a range of innovative products that are continually improved for maximum performance.

Trained technicians make sure your car is treated from roof to sills, helping to maintain its perfect showroom finish and resale value for years to come. Platinum keeps your cars finish looking slick, and offers UV, swirl, and chemical resistance.

Gtechniq Platinum has been laboratory tested by a number of leading Paint Protection Film (PPF) manufacturers and has been approved for use on their films. Using Platinum on a PPF protected car will make it easier to maintain and protect it from UV damage.

Glass protection

All external windows are treated with a hydrophobic coating which is durable and optically clear. The non-stick nature of the coating makes your glass so much easier to clean. Rainwater is repelled off your windows offering fantastic wet weather visibility, and added driving safety.

Gtechniq glass protection has been used by a number of World Rally Championship Teams to improve visibility, and make driving safer.

Interior protection

Research suggests we spend an average of 30 hours a year stuck in traffic alone. This makes the interiors of cars subjected to conditions which can encourage the growth of microbes. Food remnants, spillages, dirt, little sticky fingers, and dust, can support the growth of microorganisms like bacteria and fungi.

Gtechniq's interior products keep leather and fabric looking newer, and smelling fresher for longer. Using Gtechniq with added antimicrobial technology on your car's interior can help prevent the growth of microbes.

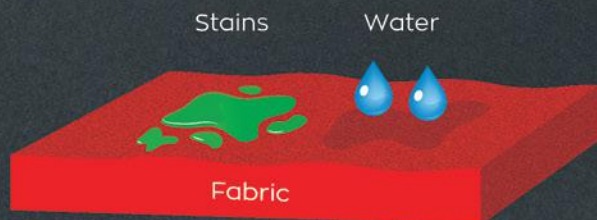

Leather

On top of the antimicrobial benefits, Gtechniq leather protection can reduce wear on prone areas of leather or vinyl seats, such as piping and leading edges. It also makes dye transfer from clothing easier to remove.

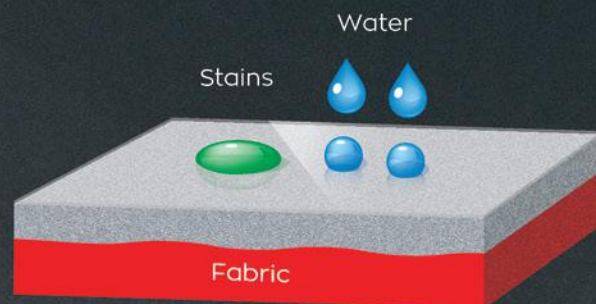

Fabric

Fabric soiling can be reduced dramatically by using Gtechniq Platinum on the interior of your car. Spilt coffee, kids' ice creams, even coke, can in most cases be wiped away with a damp cloth, without staining.

Paint protection

THE SCIENCE BEHIND THE SHINE

Platinum Crystal Coat forms an ultra-durable, high-gloss, slick-to-touch, chemically bonding, inorganic layer of 9h optically clear ceramic. This ceramic protection actively reduces the number of swirls in your car's paintwork, retaining its candy-like gloss, and new look much longer than any wax or standard sealant.

The coating has been scientifically formulated to chemically bond to the surface of your car's paintwork. The chemical bond makes the coating the active surface of the car, shielding it from dirt, acid rain and detergent.

Its highly dense layer is resistant from pH2 - pH12. This makes contaminants such as tree sap, tar and hard water spots easier to remove.

Wheel protection

Gtechniq Platinum wheel protection is unique. Alloy wheels are porous, the Platinum formula bonds to the surface of your wheels to become the functional layer – filling in all crevices, resulting in a dense, slick surface. This makes them much easier to clean, repelling dirt and brake dust, as well as reducing stains.

Braking force means your wheels can get very hot, for that reason Platinum wheel protection is resistant to temperatures up to 300°C.

With you every mile

To ensure your car retains its new look we provide you with a complimentary aftercare kit, exclusive to car dealerships.

The kit contains everything you will need to protect your investment from shampoo, to glass cleaner. You also get C2 Ceramic Sealant - a wipe-on, wipe-off hydrophobic coating that adds gloss, and gives up to six months water and dirt repellency to your paintwork.

Each product has been scientifically formulated to work hand-in-hand with Gtechniq coatings, providing the best durability and protection for your car.
